

Table of Contents

1. Biodiversity – an introduction	1
1.1 Origins of the concept	1
1.2 Components of biodiversity	3
1.3 What is a species?.....	5
1.4 Time-space scales in the study of biodiversity	5
1.5 Genesis of biodiversity	6
2. Species diversity.....	9
2.1 How big was Noah’s Ark?	9
2.2 Species concepts.....	12
2.3 The terrestrial and marine realms	13
2.4 Speciation	14
2.5 Patterns of speciation.....	14
2.5.1 Geographical (allopatric) speciation	16
2.5.2 Sympatric speciation	17
2.5.2.1 Polyploidy speciation	17
2.5.2.2 Competitive speciation.....	18
2.6 Extinction	19
2.7 Estimators of species richness	21
2.7.1 Extrapolation methods	23
2.7.2 Interpolation methods.....	27
2.8 Measures of species diversity	28
2.9 Species diversity and scale	32
3. Patterns of species diversity in time and space.....	35
3.1 Species dynamics in time	36
3.1.1 Evolutionary time scale.....	36
3.1.2 Ecological time scale.....	39
3.1.3 Seasonal time scale	42
3.1.4 Daily time scale.....	45
3.2 Species dynamics in space.....	45
3.2.1 Patterns of distribution	46
3.2.1.1 The latitudinal gradient	46
3.2.1.2 Altitudinal gradient	48

3.2.1.3	Depth gradient	49
3.2.1.4	Longitudinal gradient	50
3.2.1.5	Radial gradient	50
3.2.2	Species-area relationships	51
3.2.3	The role of environmental disturbances	54
3.2.4	The role of productivity	56
3.3	Patterns unrelated to the time-space scale	59
4.	Functional diversity	60
5.	Humans as an evolutionary force.....	67
5.1	The scale of human impacts.....	67
5.2	Humans as major predators of the Earth's fauna	72
5.3	Introduction of alien species	74
5.3.1	The impact of alien species	77
5.3.2	A time-scale perspective.....	78
5.3.3	Management objectives in dealing with invasive species.....	80
6.	Humans and biodiversity	81
6.1	The human socio-economic system.....	81
6.2	Biodiversity as a source of economic values	85
6.2.1	Valuation methods.....	86
6.3	Business and biodiversity	87
6.4	Implementing management systems for a sustainable use of biodiversity	88
	Glossary.....	90
	Literature cited.....	92
